Research Opportunity for Children with Cerebral Palsy!

Contribution of Visual and Vestibular Systems to Trunk Control

**Purpose:** To examine how sensory information from touch, vision, and balance organs of the ear are used by children with moderate-to-severe cerebral palsy when they attempt to sit upright.

**Eligibility:** children ages 1-12 years with a **diagnosis of cerebral palsy**, with no uncontrolled seizures, who require assistance for walking or mobility are eligible.

**Benefits:** children are paid $25 for each session (2 sessions), family might benefit from learning child’s level of trunk control and what level of support works best for the child.

Location: Pediatric Balance Laboratory
University of Hartford
200 Bloomfield Ave
West Hartford, CT 06111
